## Editor's Guide

# Major Features of Edition PieServer

**eZpublish 3 - Edition PieServer** was designed to offer people a user-friendly, off-the-shelf content management solution operating on the famous eZpublish 3 web application framework. In comparison with generic utilities, off-the-shelf utilities give you easy and straightforward access to advanced operations at the price of lower operational flexibility. Or, to put it in simpler terms: Edition PieServer is made for those who want to build a nice looking site, which is easy to maintain, in just one day and do not to expect they could do anything possible with eZpublish this way.

In spite of this inevitable trade-off between user comfort and flexibility, you should be familiar with what you can expect from Edition PieServer in its first public version before you start deploying and using this content management template suite. So here are the features supported by Edition PieServer so far:

- An automated site layout + navigation model, which lets you flexibly choose among & switch between site layout schemes consisting of
  - a top navigation context menu (sticky & customizable)
  - a subheader-menu (optional),
  - left & right tree-menus (both optional)
  - footer (sticky & customizable)

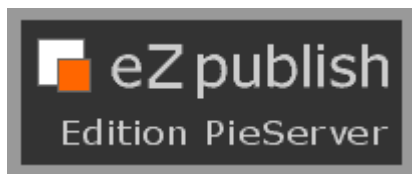

- An advanced sitemap-utility for user and admin sites which lets you switch between overview- and workbench-templates by pressing sensitive icons

## Sitemap

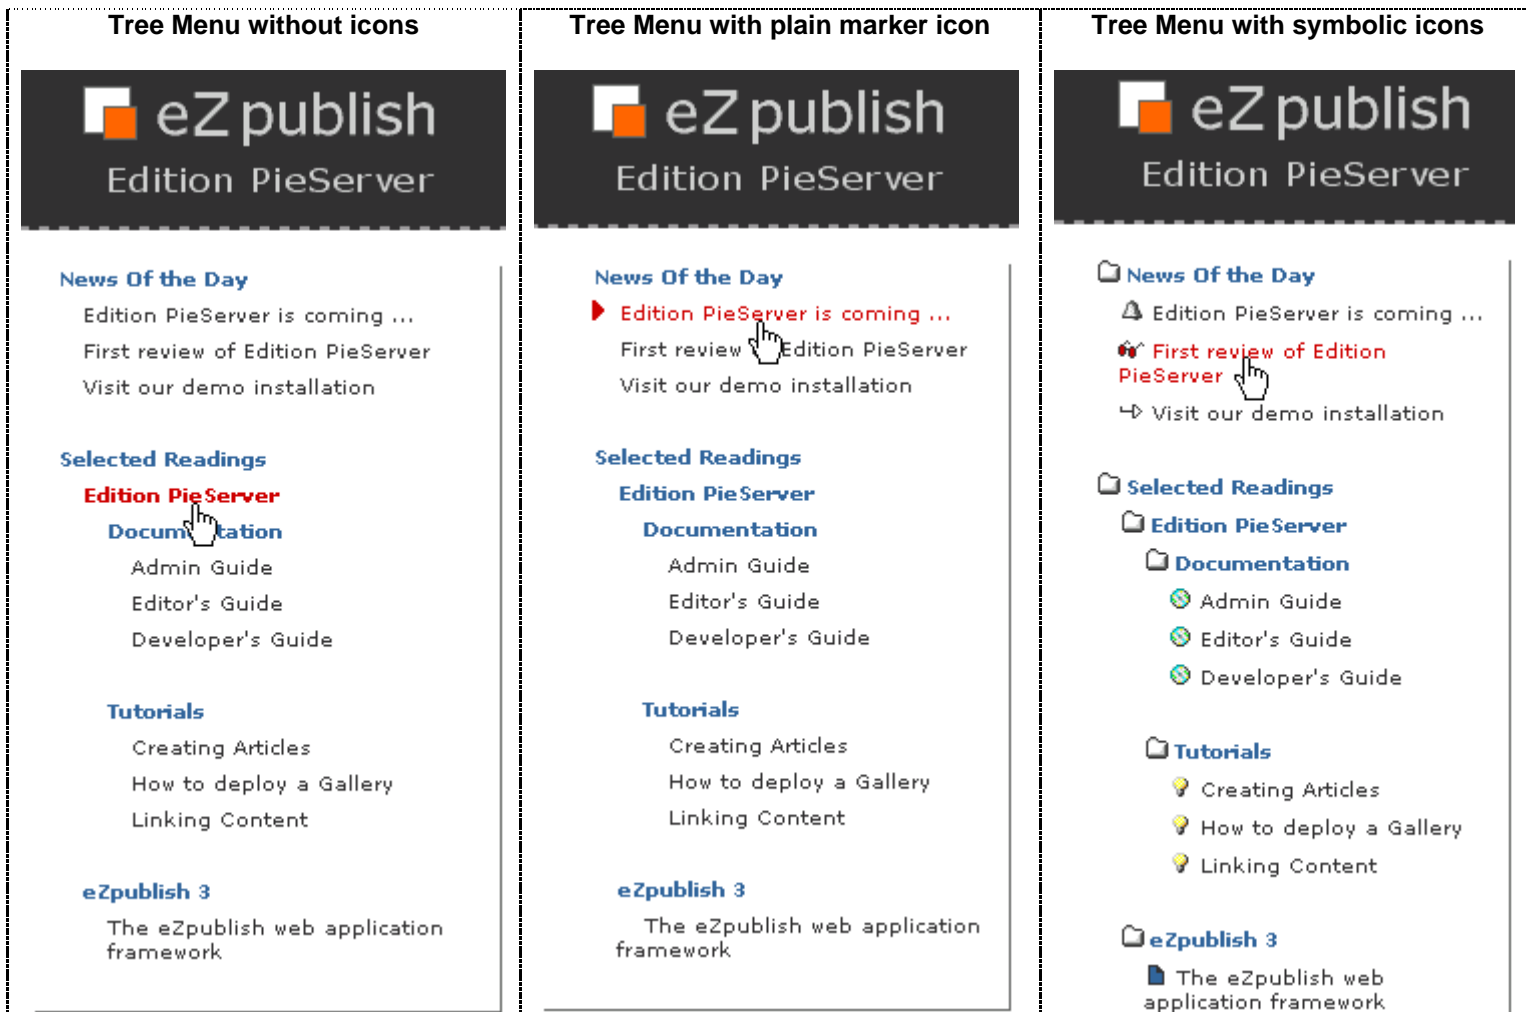

- A tree-menu navigator with unlimited indentation levels and different look & feel options

## Editor's Guide

- A very powerful, rich-text content type 'Article' with arbitrarily large arrangements of separately editable paragraphs and layout images, file attachment support, editorial note support, link hotspot support, associated comment template support etc. This is definitely the most powerful article-type that was ever released with an eZpublish distribution so far. The following collection of screen shots give you an impression of the flexible article-body component in editor's view (admin UI), the look & feel of an article created with the Edition PieServer article-type and the user comment template.

- Content types to manage internal and external links
- And last, but not least ....

## Editor's Guide

- .... the Edition PieServer Image Gallery. This is probably also a tool you will like. A shortcoming to be mentioned is that the xml-image-auto-loader of eZsystems has yet to be integrated with this gallery tool. Edition PieServer Gallery comes with a dedicated page layout, a javascript-based slideshow and a full-fledged control menu for different image view modes and navigation. Here are some impressions:

### 1. Internal reference pointing to an image gallery in content layout

## Editor's Guide

### Edition PieServer Gallery Layout – Thumbnail view mode

- For those who have to offer user post forms with customized user-redirection after form submission and storage of forms at defined places in the node-tree, Edition Pieserver offers another useful content type named 'Form Trigger'. Form Trigger objects are simple shorthand-solutions for more complex workflow-definition of user form processes. Form Trigger objects can be configured to
  - display a custom push button to launch the user form (content edit-template) at an arbitrarily chosen place on your site,
  - store forms at a defined place in the node tree
  - redirect the user to another well defined page after form submission.
